

... to protect all household electronics from electrical surges.

Three types of protection effectively shield the entire house from all types of power surges - no matter the entry point.

An AC line protector installed at the electrical power panel ... eliminates power surge damage to the panel itself, all outlets serving appliances, TVs, stereos, computers, peripherals, the furnace, air conditioners, spa, pool and sprinkler system.

See an electrician.

A telephone line protector installed at the telephone junction box ... eliminates damage to equipment connected to the telephone line - computers, faxes, answer machines, postage machines, DVRs.

See your telephone service provider.

A coaxial cable line protector installed on your video transmission line ... protects the cable box, cable modem, video recorders, televisions and home theatre equipment.

See an electronics store.
