

... to convert air filters into air cleaners - powdered activated carbon.

Powdered Activated Carbon (PAC) in water filters removes tastes and odors and makes drinking water clean and attractive. PAC in room air cleaners adsorbs airborne odors and makes indoor air clean and attractive. Applying PAC to air filters converts them into air cleaners.

## PAC dry powder

While air filters are in place and indoor air is circulating, dose the filters by puffing PAC at the rate of 10 puffs per foot<sup>2</sup> of area of the largest return air intake grill within each zone

## PAC Cloth

20-inch wide Kimberly Clark's Intrepid<sup>®</sup> electret, machine-treated with PAC

Place Gray Matter<sup>®</sup> media directly on cooling coils in place of the sponge or screen-type air strainer. Replace media when air flow is reduced.
