

... to make roofs cool and long-lasting - silicone coating.

### Advantages:

- eliminates the need to tear off and replace roof
- provides a seamless, durable membrane
- standing (ponded) water is contained
- reflective coating reduces cooling costs
- lower roof temperature prevents underlying roof failure
- exceptional weathering characteristics
- maintains flexibility even at extreme temperatures
- breathable membrane prevents moisture entrapment
- resists ozone, harsh chemicals
- lasts for decades

### Preparation

- Surfaces must be clean, dry and free of oil, grease or dirt.
- Existing coating must be checked for good adhesion.

### Application

- airless sprayer, synthetic bristle brush, long nap roller
